About Me

Motivated and detail-oriented Junior Software Engineer with a solid foundation in Java, automation testing, and backend development. I have hands-on experience with Java and Spring technologies, test automation and working with RESTful APIs. Skilled in collaborative projects, version control with Git, and applying best practices in clean code and testing. Continuously expanding my knowledge through personal projects, technical courses, and practical experience. Eager to contribute to meaningful and challenging projects within a professional development team.

Experience Automation QA Engineer Intern (Java)

12.2024 - 06.2025

Grid Dynamics

- Developed and maintained automated tests using Java, JUnit, TestNG, Selenium, and REST Assured.
- Performed API and web application testing.
- Collaborated with an international team during technical and soft skills workshops.
- Identified and reported software defects, created test reports.
- Used Git for version control and contributed to CI/CD pipelines.
- Improved understanding of Docker, SDLC, and test automation best practices.
- Continuously improved backend and testing skills through courses, self-learning, and practical projects.

My Projects Android Application for Identifying Instruments – Academic Project (2024)

github.com/laura-w/InstrumentFinder

Mobile application in Kotlin designed to identify musical instruments from recorded sounds using a machine learning algorithm hosted on a Python server. It is integrated with a server that processes audio files using machine learning. This project was developed as part of my master's thesis.

Technologies used: Kotlin, Python, Flask

Social Network Application – Academic Project (2023)

github.com/SpringSummerSN/Social-Network

A collaborative project to create a social networking site. Worked as part of a team to develop the application using Java, Spring Boot, and REST API. Developed functionality for users to manage posts, functionality to register users and created various RESTful endpoints. Conducted code reviews.

Technologies used: Java, Spring Boot, Spring Security, REST API, JUnit, MySQL, Git, Swagger, Jira

Education

10.2022 - 06.2024

Marie Curie-Skłodowska University Lublin

**Master's degree in Computer Science,
specialization in Software Development**

10.2018 - 09.2021

Marie Curie-Skłodowska University Lublin

**Bachelor of Mathematics,
specialization in Computer Mathematics**

Courses

2025

GCP Cloud Digital Leader - Google Cloud

2022

Junior Java Ready

The course gave me a strong foundation in Java and key technologies like Spring, Hibernate, and Git, while also teaching best development practices and improving my coding and teamwork skills.

Tech Skills

- Java
- SQL
- Spring Boot, Hibernate
- JUnit, TestNG
- REST API
- Postman
- Maven, Gradle
- Git
- Docker
- Bash, MacOS
- TDD, Clean Code
- IntelliJ IDEA

Soft Skills

- Analytical thinking
- Problem-solving
- Strong attention to detail
- Effective team collaboration
- Fast learner and self-motivated
- Good time management

Languages

- **English** - intermediate level (B2) allowing for communication and reading documentation
- **Polish** - native
